

DECIDE

Code Willing's "Decide Suite" combines CWIQ Data Store and CWIQ File System to leverage CWIQ Bench tools like Jupyter Lab for initial browser data analysis. CWIQ SIM provides for more sophisticated analysis, including simulation and backtesting and may be utilized with the CWIQ Route to designate jobs internally or to the cloud for analysis.

Code Data to the Security Identifier to seamlessly connect your licensed and/or evaluation data for multi-data set analysis

Raw, Normalized and Security Mapped data options for evaluation

Browser based evaluation tools for first pass analysis to confirm data suitability and completeness

Institutional class data simulation, backtesting and seamless deployment to production with tools like Jupyter Lab, Visual Studio, Dask, and others.

Select and route the job internally or to the multiple cloud environment to align with security requirements, speed to complete, and compute power to optimize your budget

Integrate your portfolio optimizer or use our library
